# Test Report

## Alex Guerrero, Keyur Patel and Shafeeq Rabbani

### November 27, 2015

# 1 Revisions

Table 1: Revisions

| Name | Date | Description |
|------|------|-------------|
| Keyur Patel | 27/11/2015 | Created Test Report latex file |
| Keyur Patel | 27/11/2015 | Added table template for unit testing AND info |

# Contents

# 2 Features that were Tested

- 1:The functional requirements of the product

- 2:The classes and methods of the product (Model)

- 3:The GUI of the product

# 3 Testing Types

Testing can be broken up into different types, which each have their own role in the testing the product. These test types should be utilized to comprehensively evaluate the quality of the product.

## 3.1 Structural Testing

Structural testing is also known as white box testing. Structural tests are derived from the program's internal structure. It focuses on the nonfunctional requirements of the product. This type of testing shows errors that occur during the implementation by focusing on abnormal and extreme cases the product could encounter.

## 3.2 Functional Testing

Functional testing is also known as black box testing. Functional tests are derived from the functional requirements of the program. It focuses less on how the program works and more on the output of the system. These tests are focused on test cases where the product receives expected information.

## 3.3 Static vs. Dynamic Testing

Static testing simulate the dynamic environment and does not focus on code exectution. This testing involves code walkthroughs and requirements walkthroughs. Static testing is used prevalently in the design stage. In contrast, dynamic testing needs code to be executed.

Dynamic testing involves test cases to be run and checked against expected outcomes. A technique to save time during dynamic testing is to choose representative test cases.

## 3.4 Manual vs. Automatic Testing

Manual testing is done by people. It involves code walkthroughs and inspection.

Automatic testing can usually be conducted by computers. The tools used to assist with automatic are unit testing tools for the respective programming language. Automatic testing relies on people for testing more qualitative aspects like GUI.

# 4  Automated Unit Testing

## 4.1  Testing for Snake.py

Table 2: Test Case for constructor

| Function Tested | input |
|---|---|
| Preconditions | none |
| Expected outcome | an array of all possible directions |
| Function Input | none |
| Test Description | constructor equality test |
| Testing Type | Correctness |

Table 3: Test Case for changeDir

| Function Tested | input |
|---|---|
| Preconditions | none |
| Expected outcome | an array of all possible directions |
| Function Input | none |
| Test Description | constructor equality test |
| Testing Type | Correctness |

Table 4: Test Case for grow

| Function Tested | input |
|---|---|
| Preconditions | none |
| Expected outcome | an array of all possible directions |
| Function Input | none |
| Test Description | constructor equality test |
| Testing Type | Correctness |

Table 5: Test Case for move

| Function Tested | input |
| --- | --- |
| Preconditions | none |
| Expected outcome | an array of all possible directions |
| Function Input | none |
| Test Description | constructor equality test |
| Testing Type | Correctness |

Table 6: Test Case for remove

| Function Tested | input |
| --- | --- |
| Preconditions | none |
| Expected outcome | an array of all possible directions |
| Function Input | none |
| Test Description | constructor equality test |
| Testing Type | Correctness |

## 4.2   Testing for MainMenu.py

Table 7: Test Case for constructor

| Function Tested | input |
| --- | --- |
| Preconditions | none |
| Expected outcome | an array of all possible directions |
| Function Input | none |
| Test Description | constructor equality test |
| Testing Type | Correctness |

Table 8: Test Case for changeState

| | |
|---|---|
| Function Tested | input |
| Preconditions | none |
| Expected outcome | an array of all possible directions |
| Function Input | none |
| Test Description | constructor equality test |
| Testing Type | Correctness |

```
>>>
test_changeDirTests (__main__.TestSnakePy) ... ok
test_constructorTests (__main__.TestSnakePy) ... ok
test_grow (__main__.TestSnakePy) ... ok
test_remove (__main__.TestSnakePy) ... ok

----------------------------------------------------------------------
Ran 4 tests in 0.070s

OK
```

```
>>>
testRandomPos (__main__.TestFood) ... ok

----------------------------------------------------------------------
Ran 1 test in 0.032s

OK
>>>
```

```
>>>
test_changeState (__main__.TestMainMenuPy) ... ok
test_constructor (__main__.TestMainMenuPy) ... ok

----------------------------------------------------------------------
Ran 2 tests in 0.042s

OK
```

```
testDidSnakeHitBorder (__main__.TestPlayMap) ... ok
testDidSnakeSelf (__main__.TestPlayMap) ... ok
testGetCurrentState (__main__.TestPlayMap) ... ok
testIsSnakeDead (__main__.TestPlayMap) ... ok
testSetDiff (__main__.TestPlayMap) ... ok
testUpdateState (__main__.TestPlayMap) ... ok

----------------------------------------------------------------------
Ran 6 tests in 0.095s

OK

>>>
testGetCurrentState (__main__.TestGamePause) ... ok
testUpdateState (__main__.TestGamePause) ... ok

----------------------------------------------------------------------
Ran 2 tests in 0.045s

OK

>>>
testGetCurrentState (__main__.TestGameOver) ... ok
testUpdateState (__main__.TestGameOver) ... ok

----------------------------------------------------------------------
Ran 2 tests in 0.043s

OK
```

# 5   Testing functional requirements
